Gas App Uk is an award winning app for gas engineers to find resources and information related to their day to day work.

It includes manuals, tools, checklists and other useful documents, forms functionality, discussion area, HSE news and a horror show section.

The manuals section includes manuals for boilers, gas fires and warm air units. These can be downloaded to the app and are cached for offline viewing once they have been downloaded.

Gas App Uk presents a large variety of tools and features that helps to aid in simplifying and improving the work of a gas engineer.

The forms section is used to fill out forms such as warning notices, gas safety records and job sheets. The user enters all of the information and the app produces a great looking PDF form which can be emailed to the customer. The tools cover pipe sizing, combustion ratios and a purge calculator.

The horror show and break-time sections allow users of the app to interact. The break-time area is a discussion forum and the horror show allows users to post pictures of bad practice which are then voted on to pick the worst.

We built all of the components of the application including the cloud based database, API, Content Management System and iOS & Android Apps. The apps are optimised for tablets so also look great on iPads and Android tablets.

T

The app is subscription based so we integrated with in-app purchasing on iOS and in-app billing on Android. These subscriptions are autorenewing after 12 months, the platform does everything necessary to validate and renew the subscriptions.

A CMS is available to manage all of the content in the app and keep on top of the user generated content, some of which needs to be moderated before it is published.
